DETAILED ACTION

1. This office action is in response to preliminary amendment filed on 4/28/2006. As directed by the amendment, claims 5-7 were amended, no claims were added or cancelled. Thus, claims 1-7 are presently pending in this application.

Drawings

2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "dose counter" and "electronic means" as recited in claims 5 and 6 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner,

Art Unit: 3771

the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

- 4. Claims 1-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
- 5. Regarding claims 1-7, the phrase "such as", found in claim 1, renders the claims indefinite because it is unclear whether the limitations following the phrase are part of the claimed invention. See MPEP § 2173.05(d).
- 6. Regarding claim 7, applicant fails to disclose adaptation of pump necessary to "dispense product so finely sprayed that this spraying is undetectable by the user."

Claim Rejections - 35 USC § 102

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 8. Claims 1 and 5-7 are rejected under 35 U.S.C. 102(e) as being anticipated by Tomaka (6,651,844).

Application/Control Number: 10/577,850

Art Unit: 3771

16).

9. Regarding claims 1 and 5-7, Tomaka et al. discloses a fluid product nasal atomizing and spraying device (10) comprising a pump (column 3, lines 17-18), a spray head (20) (fig. 2) to actuate the pump manually (column 3, lines 27-28), and a dispensing detection means (40) to detect that a product does has been dispensed. The detection means (40), which is connected to electronic means (52) to process the signal, outputs a signal to inform the user that a dose has been dispensed by the pump (column 5, lines 8-12) as well as decrements a does counter (40) (column 5, lines 13-

Page 4

- 10. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 11. Claims 2-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tomaka (6,651,844) in view of Rocci (6,138,669).
- 12. Regarding claims 2-4, Tomaka et al. discloses the pump is connected to a spraying orifice (16a) through an expulsion channel (16) (fig, 2), but does not disclose the detection means being provided in the expulsion channel. Rocci et al. teaches a dose counter for a nasal device (column 3, lines 44-50) with a detection means in the form of a pressure sensor (12) provided in an expulsion channel (7) (fig. 3) and adapted to detect the passage of a product in the expulsion chamber due to a pressure difference at the time that a product dose is sprayed (column 5, lines 118). Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was

Art Unit: 3771

made to provide the nasal spray device of Tomaka with a detection means provided in an expulsion chamber as taught by Rocci in order to provide the advantage of fewer miscounts, as taught by Rocci (column 2, lines 44-47).

Conclusion

13. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Coffee (6,684,879) an inhaler with an electronic detection means in a fluid passage, Marelli (6,164,494) a nasal inhaler with counter, and Glover (4,034,757) a dispensing device with electronic compliance monitor.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to CHRISTOPHER BLIZZARD whose telephone number is (571)270-7138. The examiner can normally be reached on Monday thru Friday, 9:00AM -5:00PM EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Justine Yu can be reached on (571)2724835. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
